

THE LAVAZZA GROUP • CARBON NEUTRAL BY 2030

AWARENESS

Commitment to spreading a culture of **carbon neutrality** in its own organisation and those of its partners all along the value chain, raising their awareness and involving them in a process of continuous improvement.

1

Sustainable packaging roadmap: entire packaging portfolio to be reusable, recyclable or compostable by end 2025.

2

Coffee machine design for reduced energy consumption, use of recycled materials and average life cycle extension.

3

Responsible use of natural resources, improving **energy efficiency** and utilisation of renewable energy sources.

MAIN STEPS

MONITORING

Monitoring carbon emissions in the three categories identified by the GHG Protocol Standard, an international protocol for calculating greenhouse gases:

SCOPE 1

Emissions generated by activities under the direct control of the Company.

SCOPE 2

Indirect emissions deriving from the generation of electricity, heat and steam purchased and consumed by the Company.

SCOPE 3

Indirect emissions across the entire supply chain.

Commitment to offsetting residual and non-reducible emissions by purchasing so-called "**carbon credits**". This drive began in 2020 and has led to full carbon emissions neutrality for scopes 1 and 2, through a series of offsetting projects with positive impacts both on the environment and on the socio-economic conditions in beneficiary communities in Peru, Uruguay and Zimbabwe.
